Petroleum Energy Center, JAPAN

The 5th JCAP Conference  
National Center of Sciences Building  
Tokyo, Japan  
Feb. 22-23, 2007

# Overview

1. Air quality status in China
2. Regional and urban air quality in YRD
3. Future pressures in YRD
4. Conclusion

1.中国大气污染状况

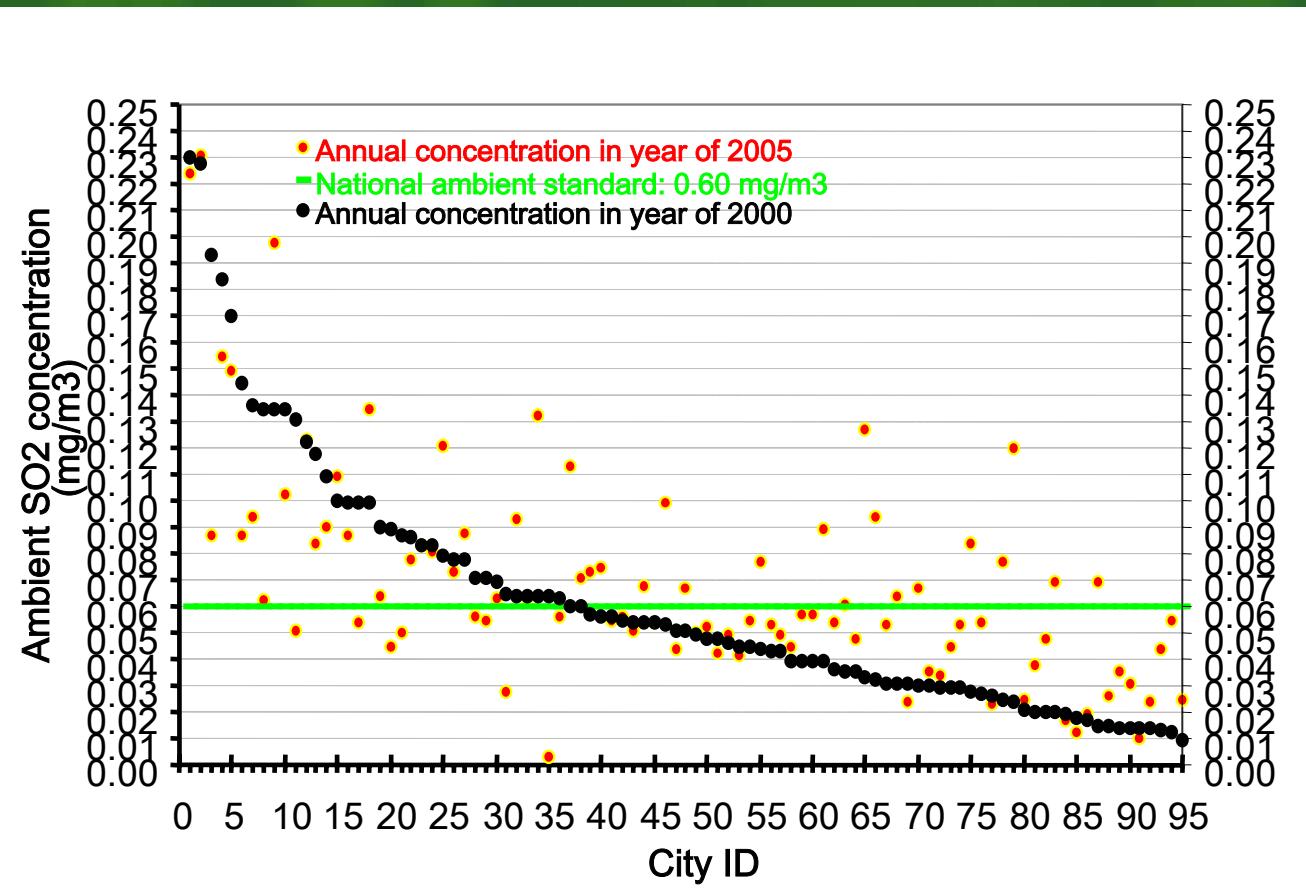

1. Air quality status in China

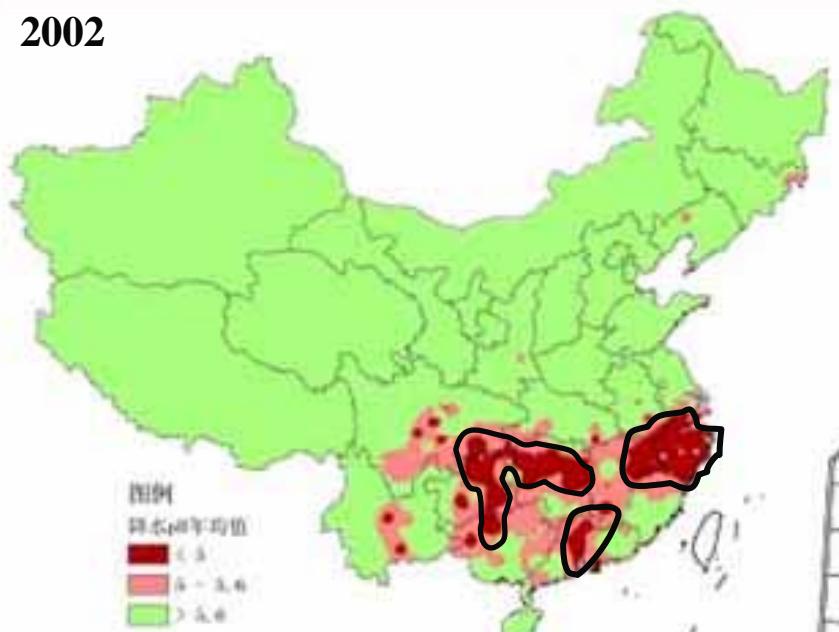

# 1.1 城市空气质量总体上在改善, $\text{SO}_2$ 高浓度污染显著降低,但低浓度在恶化

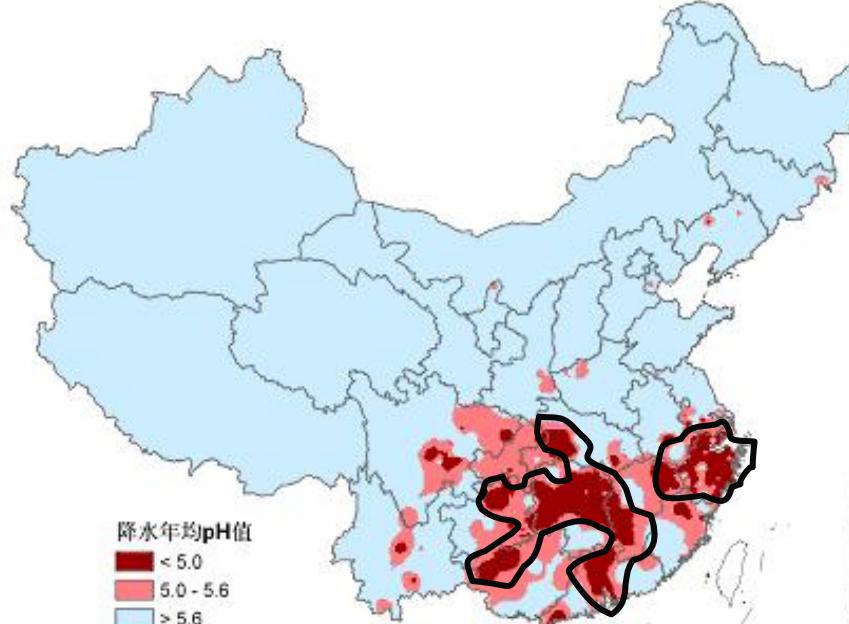

Urban air quality has been improved in the 10th five-year from 2000 to 2005, the improvement is obvious in decreasing the high concentration of  $\text{SO}_2$  in some cities, but the low concentration of  $\text{SO}_2$  in some cities are getting worse.

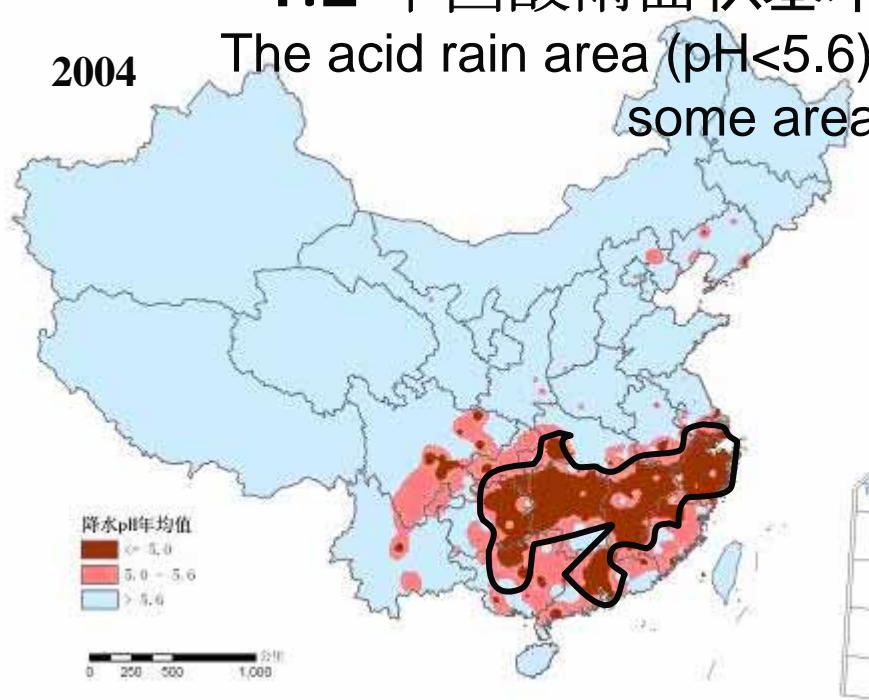

2002

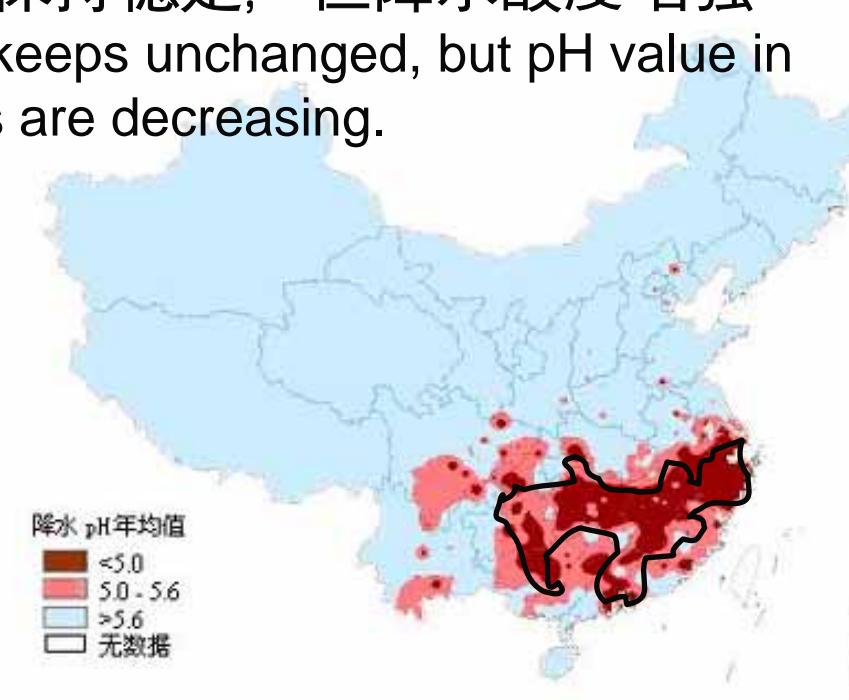

2003

2004

2005

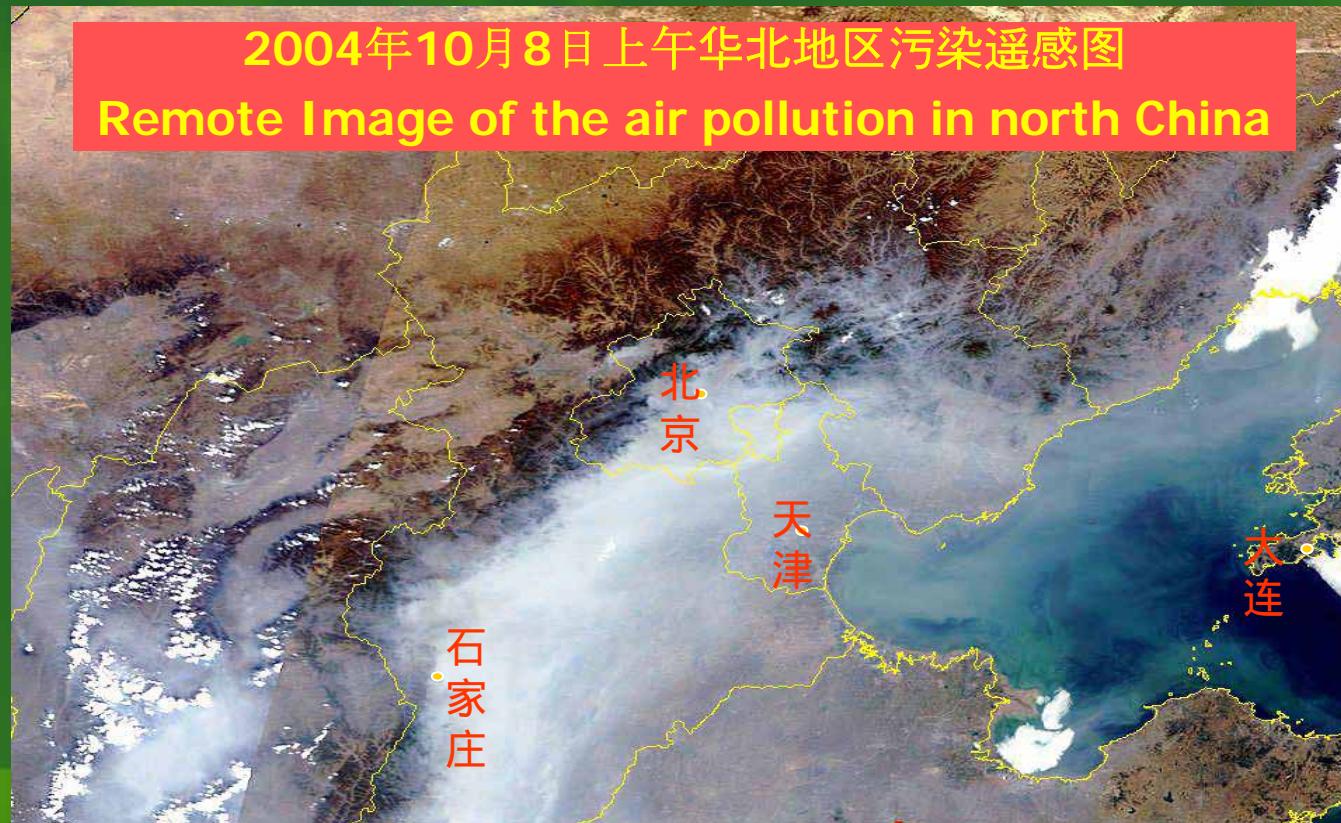

## 1.2 中国酸雨面积基本保持稳定，但降水酸度增强

The acid rain area ( $\text{pH} < 5.6$ ) keeps unchanged, but pH value in some areas are decreasing.

# 1.3 区域污染源与本地污染源的共同作用导致某些地区出现复合型空气污染,细颗粒和臭氧升高,能见度降低

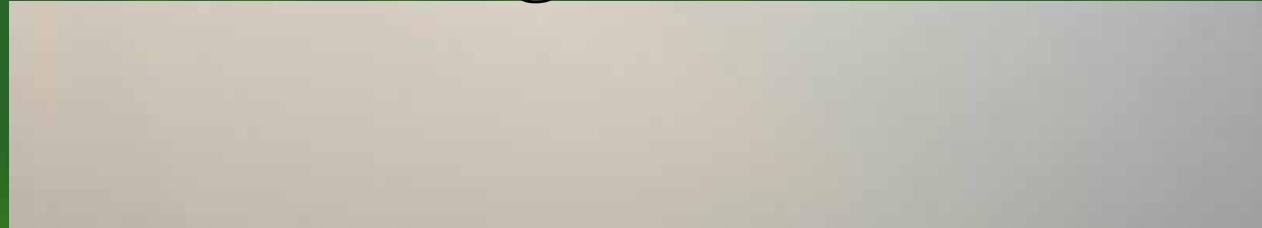

Regional and local air pollutant emission sources cause heavy and complex air pollution in some regions, e.g. Big Beijing area, Yangtze River Delta (YRD), and Pearl River Delta (PRD) with high level fine particle matter and ozone and poor visibilities.

## 1.4 在某些不利气象条件下，区域性灰霾频繁出现

Badly visibility frequently emerges in some extreme meteorological conditions.

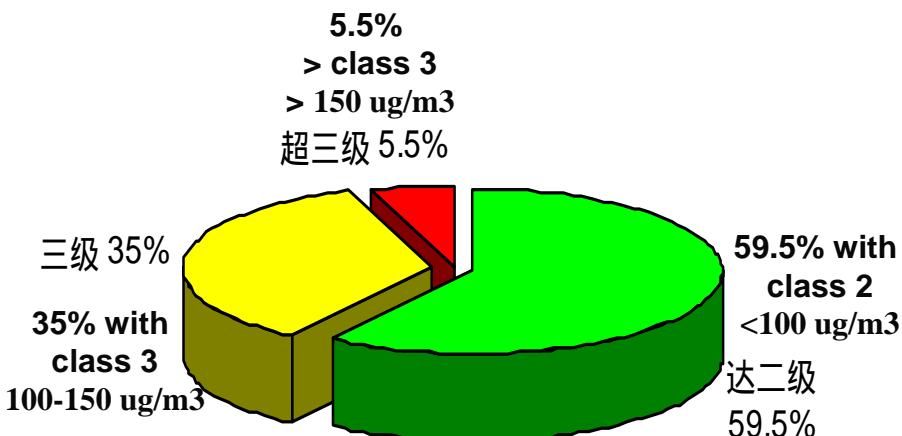

# 1.5 城市空气颗粒物、SO<sub>2</sub>污染状况

## Many people expose to high level of air pollutions

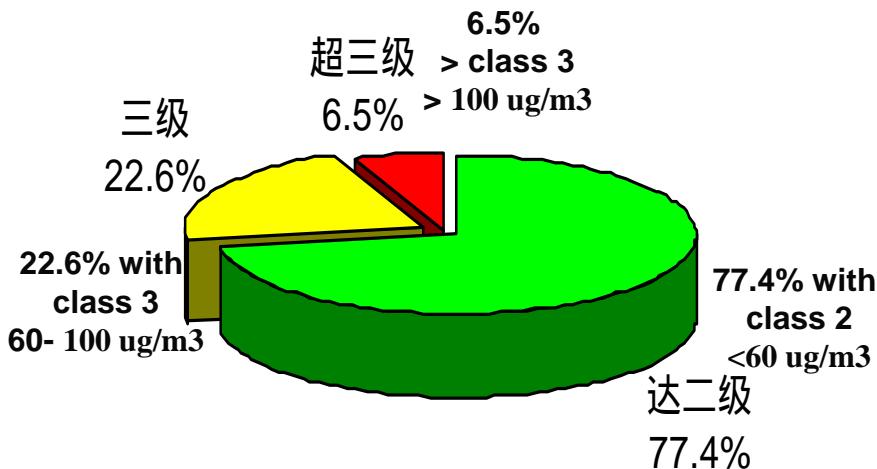

PM

522cities monitored  
In 2005

2005年监测522个城市

SO<sub>2</sub>

522cities monitored  
In 2005

2005年监测522个城市

# 造成中国空气污染的主要原因

# The driving forces of air pollution in China

# 造成空气污染的主要原因

## The driving forces of air pollution in China

---

1. 经济高速增长, 主要耗能产品大幅增加

Rapid growth of economics in  
the past years, and fast  
increase of products with high  
energy consumptions.

# 造成空气污染的主要原因

## The driving forces of air pollution in China

### 2. 火电厂SO<sub>2</sub>排放量大幅度增高

**Big increase of SO<sub>2</sub> emission from power plants, due to:**

- 电力发展十分迅速

**Rapid development of power generation**

- 发电机组SO<sub>2</sub>超标排放普遍存在

**Exceedance of SO<sub>2</sub> emission from power plants are ubiquitous**

# 造成空气污染的主要原因

## The driving forces of air pollution in China

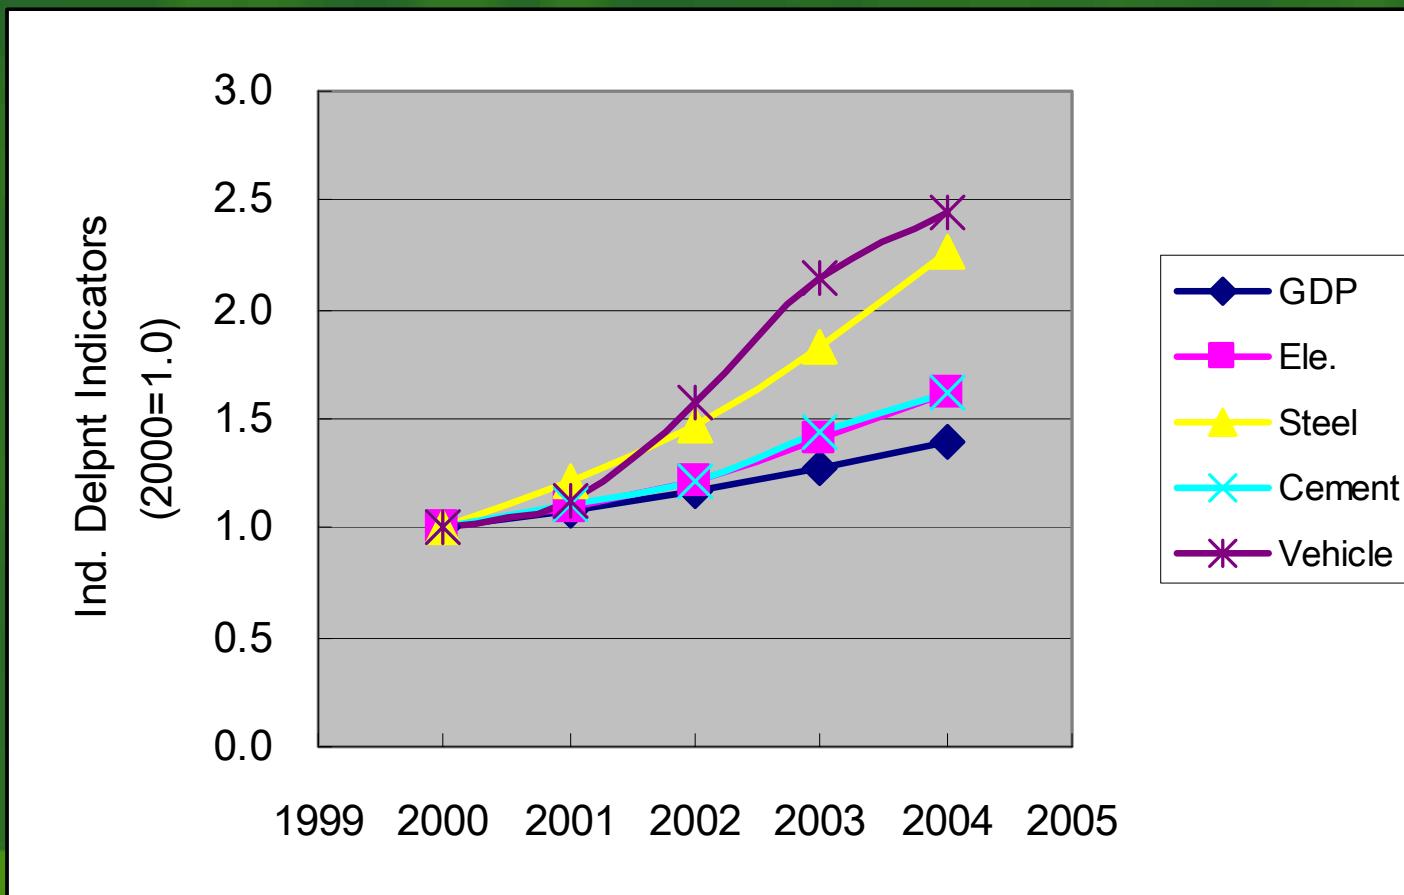

3. 污染控制力度滞缓于排放量增长速度

**Pollution control policy steps slowly to follow up the emission increase or air pollution trends**

# 1. 经济高速增长, 主要耗能产品大幅增加

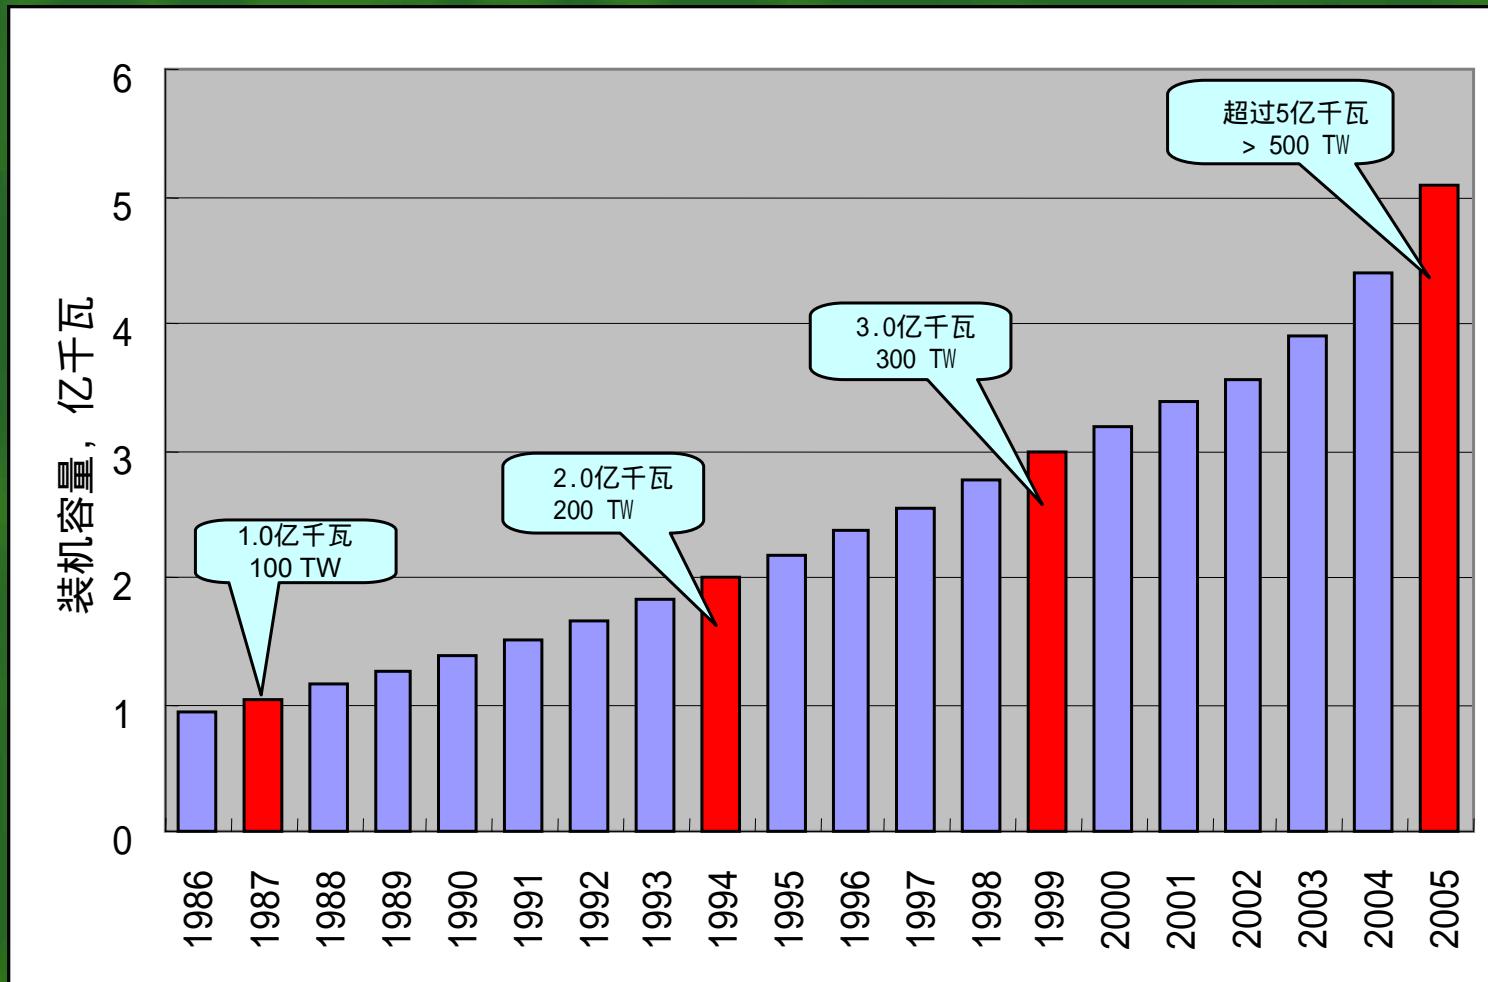

Rapid growth of economics in the past years, and fast increase of products with high energy consumptions

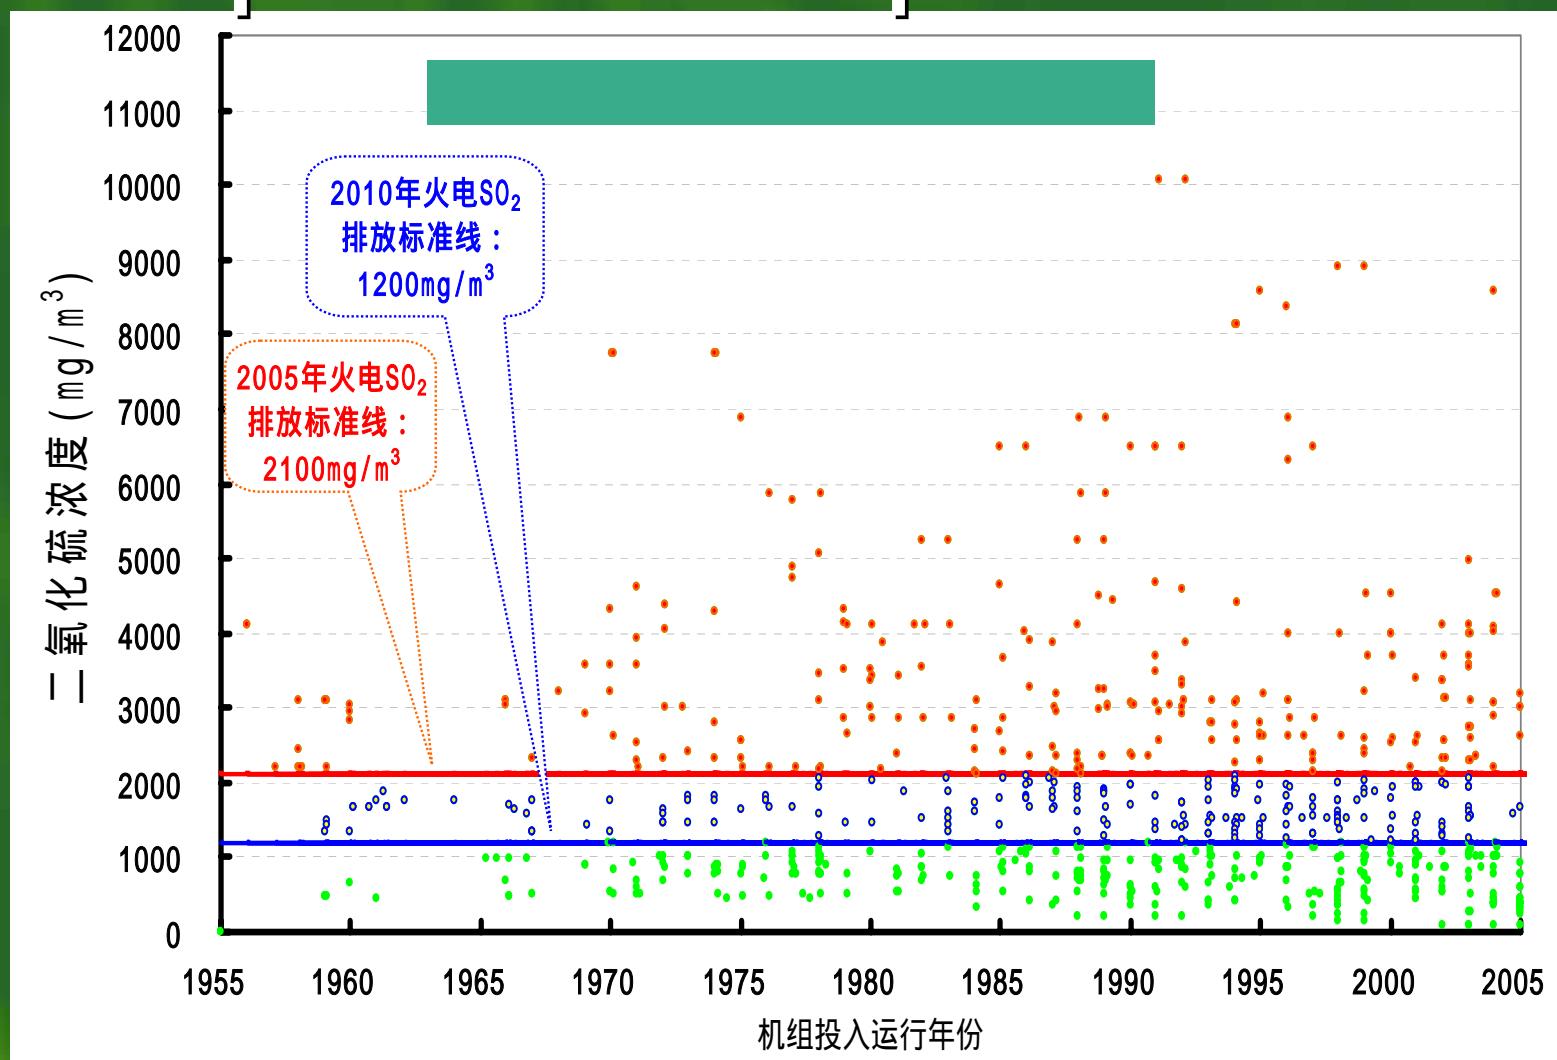

## 2. 电力发展十分迅速

### Capacity of power plants were growing in an amazing speed.

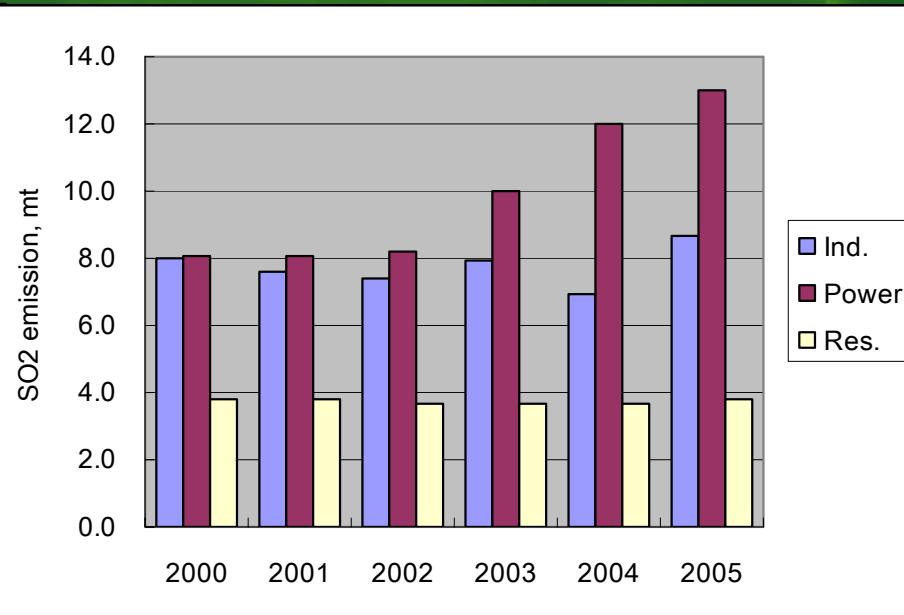

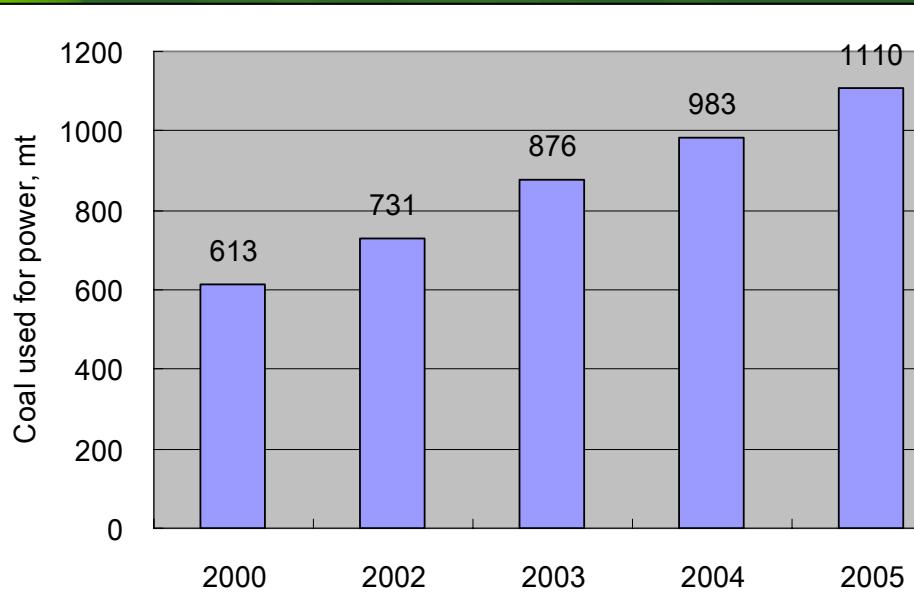

### 3. 发电机组SO<sub>2</sub>超标排放普遍存在 Exceedance of SO<sub>2</sub> emission from power plants are ubiquitous.

# 4. 火电厂SO<sub>2</sub>排放量大幅度增高 Big increase of SO<sub>2</sub> emission from power plants.

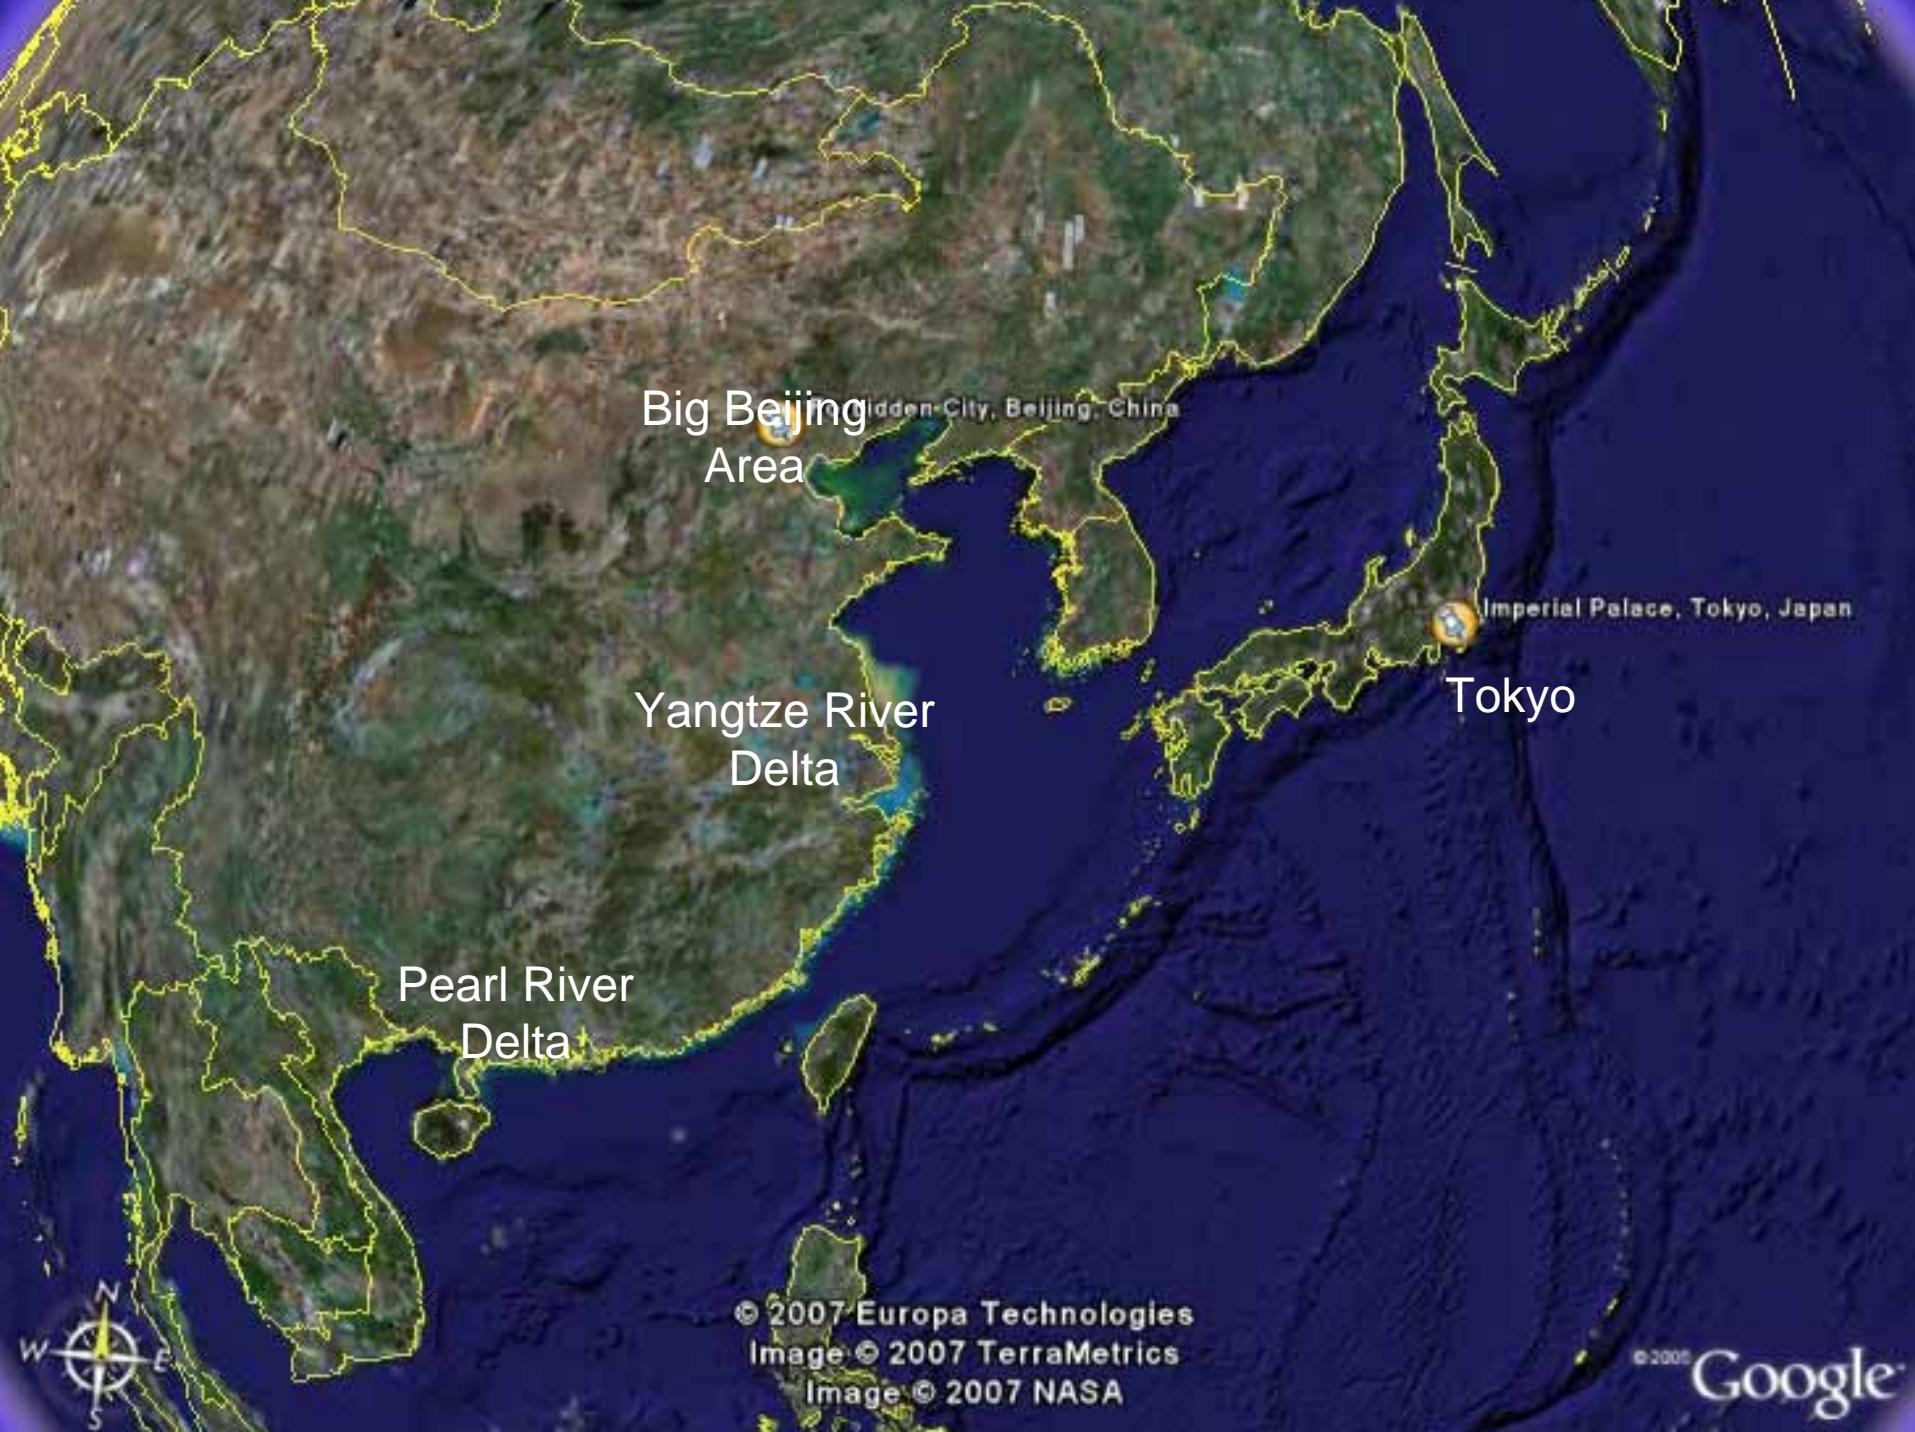

- ❖ 2005年全国发电用煤11.1亿吨，比2000年增加了5亿吨，SO<sub>2</sub>增加了60%。
- ❖ The coal used for power generation was 600 million tons in 2000, and increased to 1.1 billion tons in 2005. Total amount of SO<sub>2</sub> emissions in 2005 was 60% higher than

## 2. 长三角区域大气污染状况

# Regional and urban air quality status in Yangtze River Delta

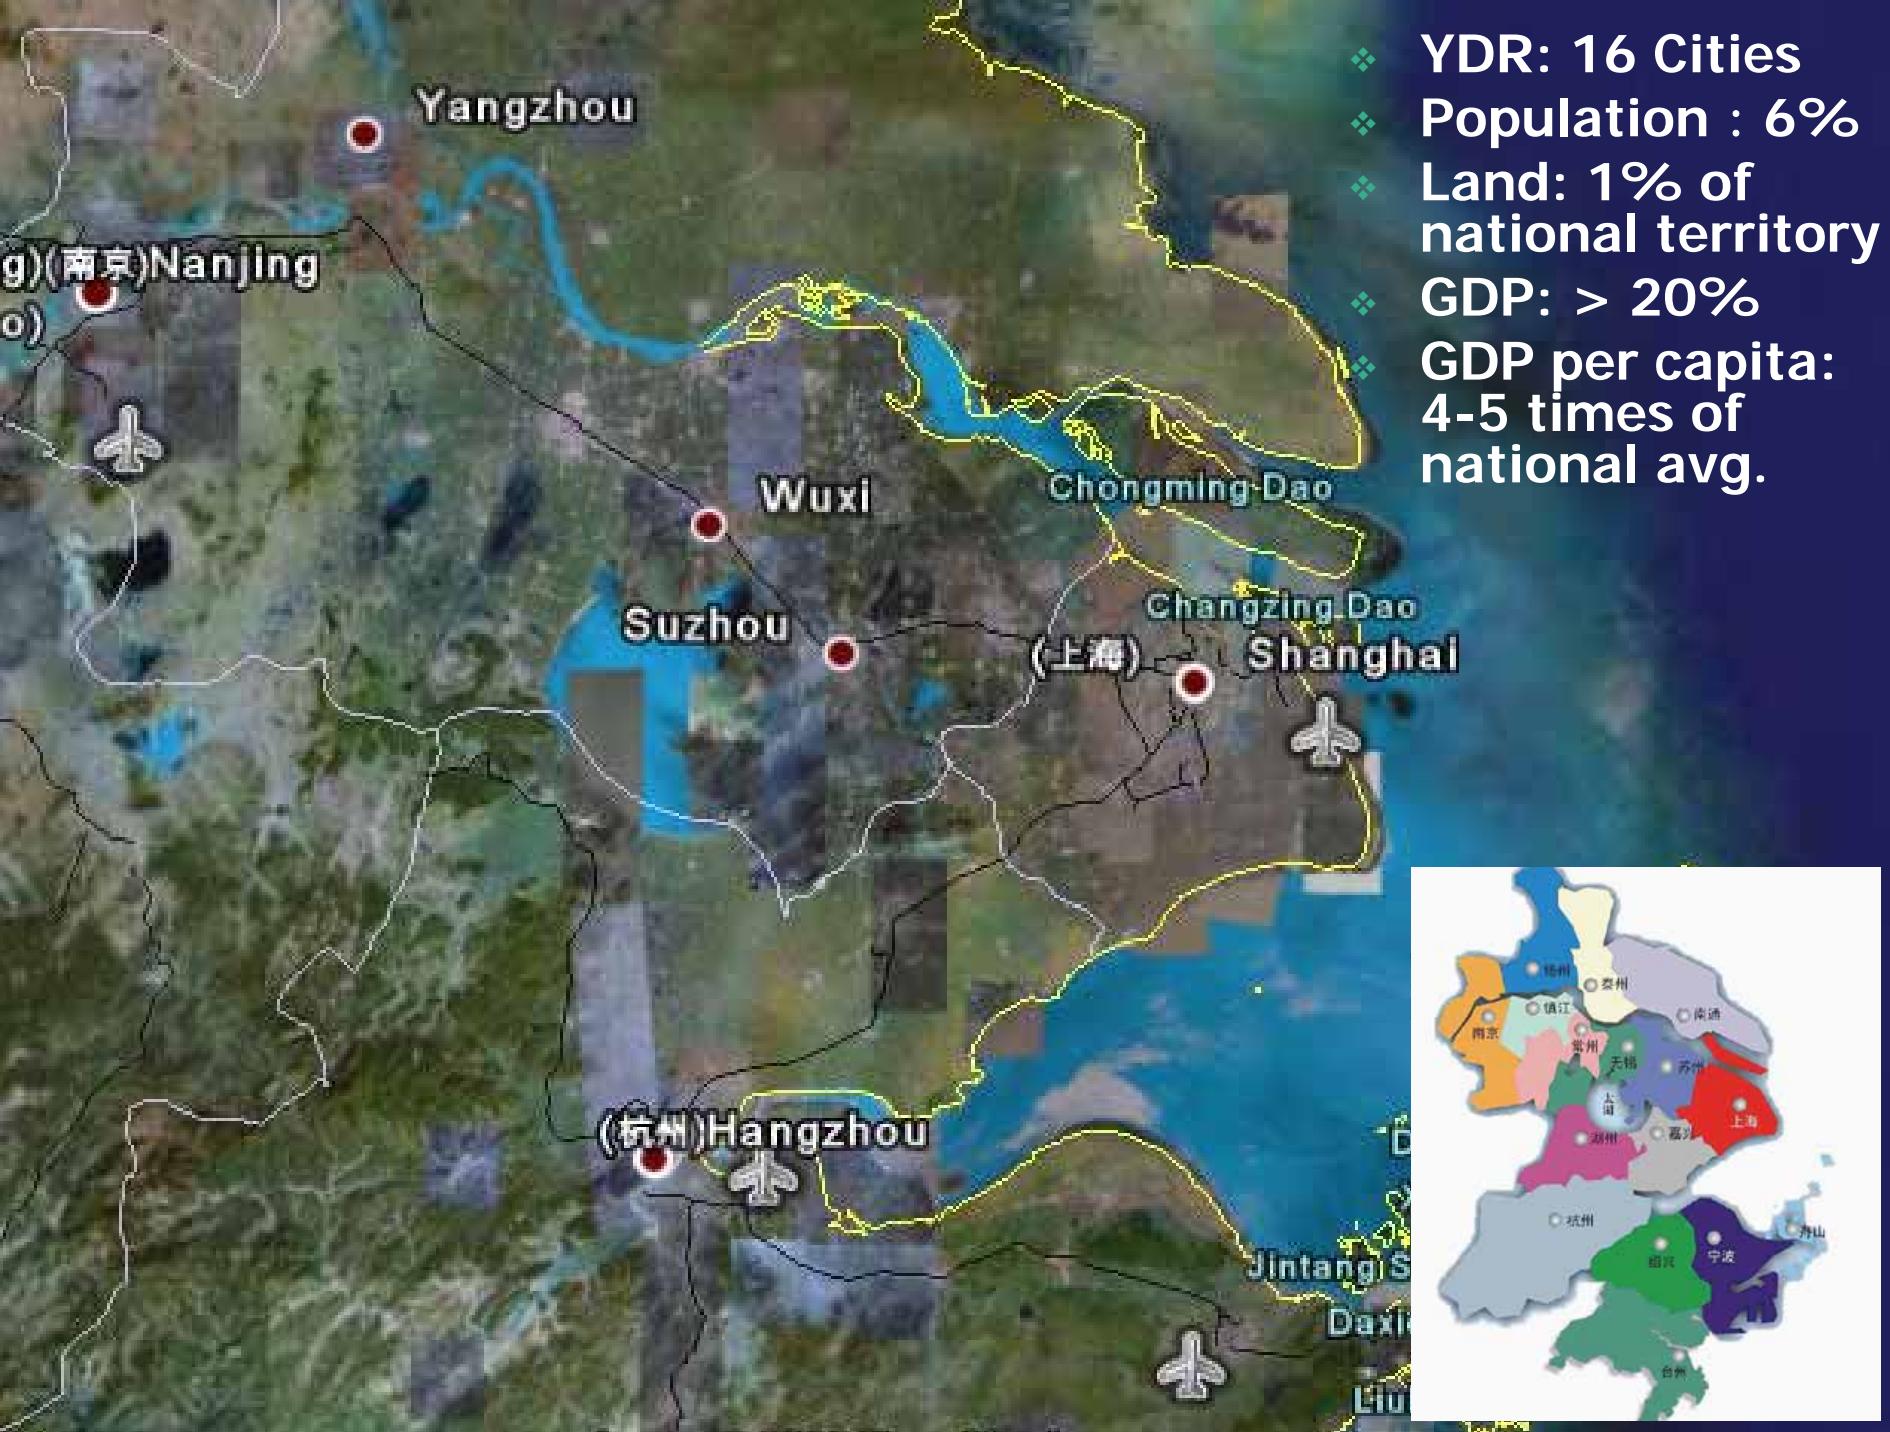

Big Beijing  
Area

Yangtze River  
Delta

Pearl River  
Delta

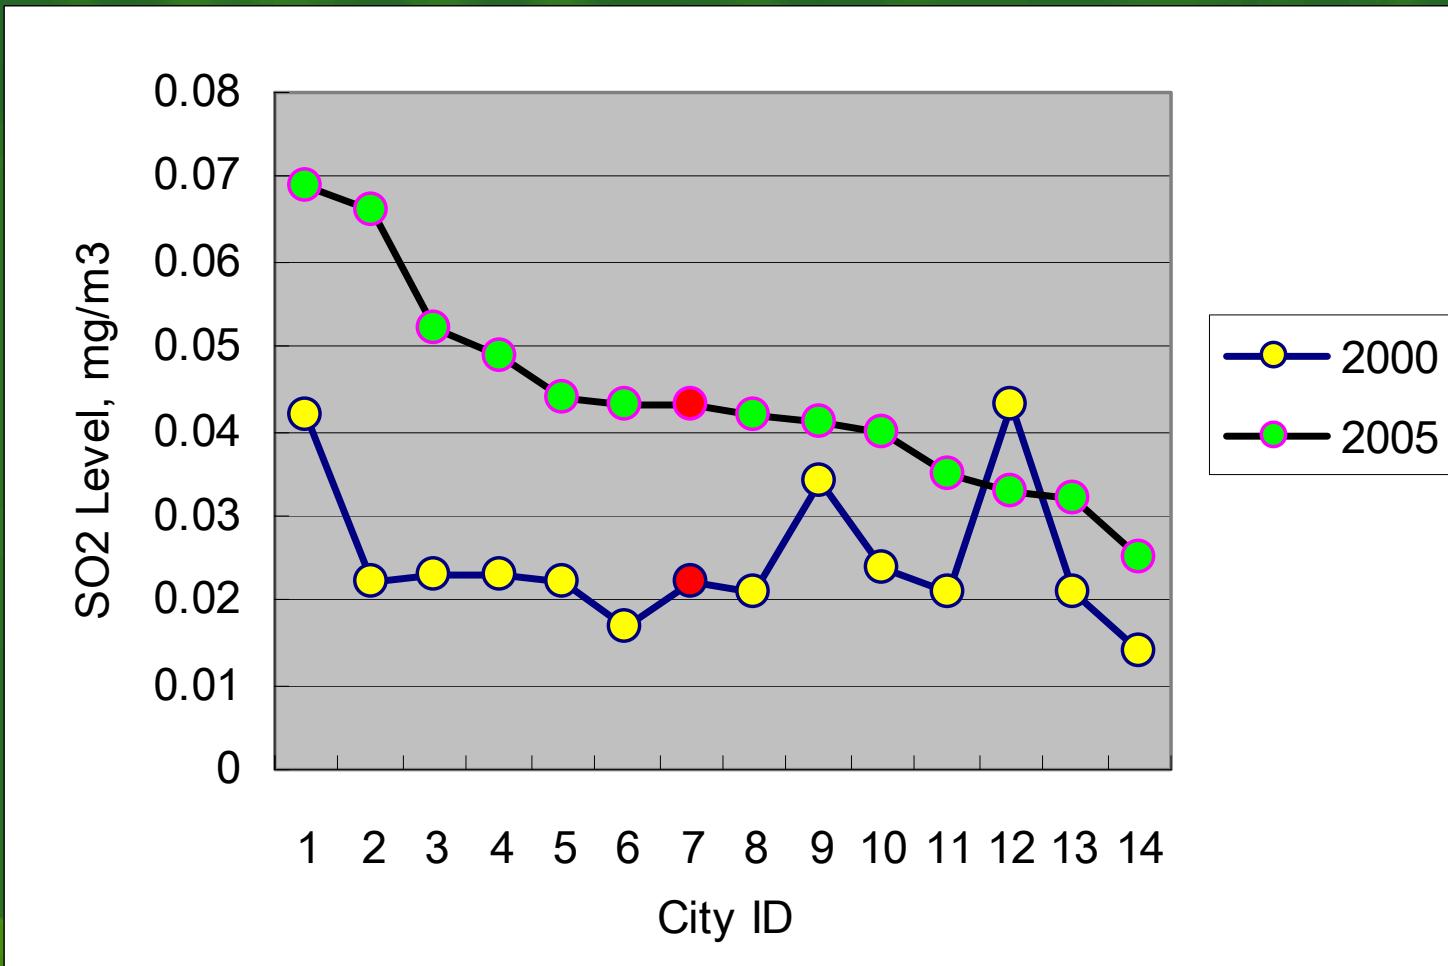

Imperial Palace, Tokyo, Japan  
Tokyo

# 1. 2005年城市大气质量普遍差于2000年

SO<sub>2</sub> pollution level in the cities within YRD in 2005 was generally higher than 2000.

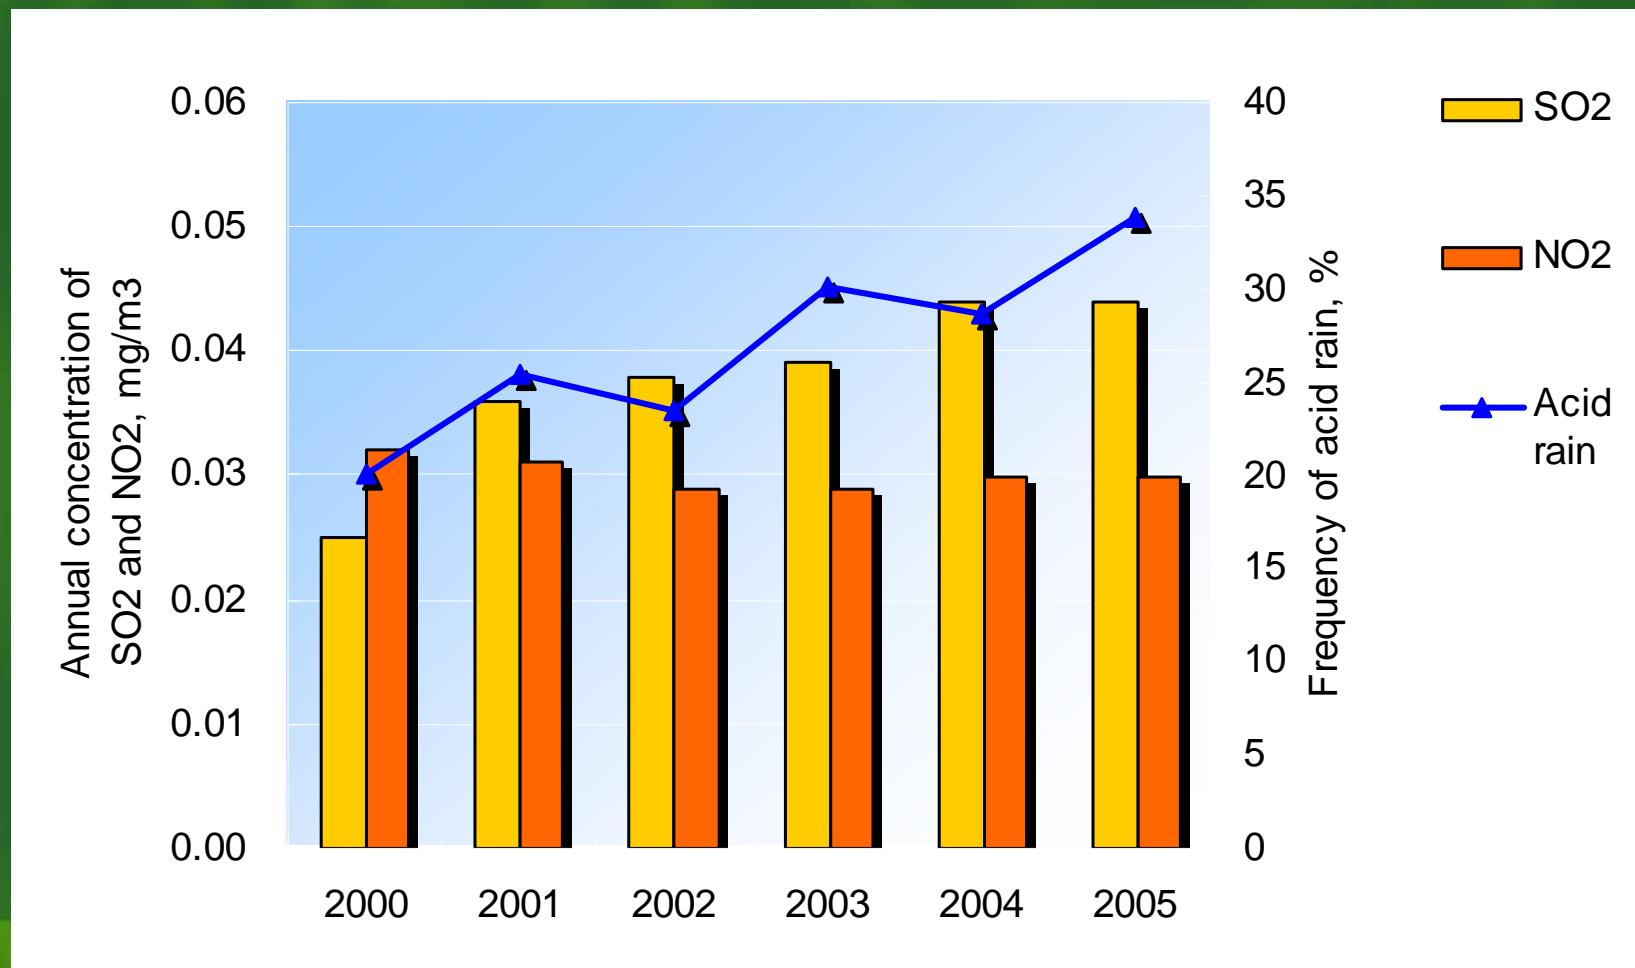

## 2. 2000~2005年SO<sub>2</sub>和酸雨频率

普遍升高—江苏案例

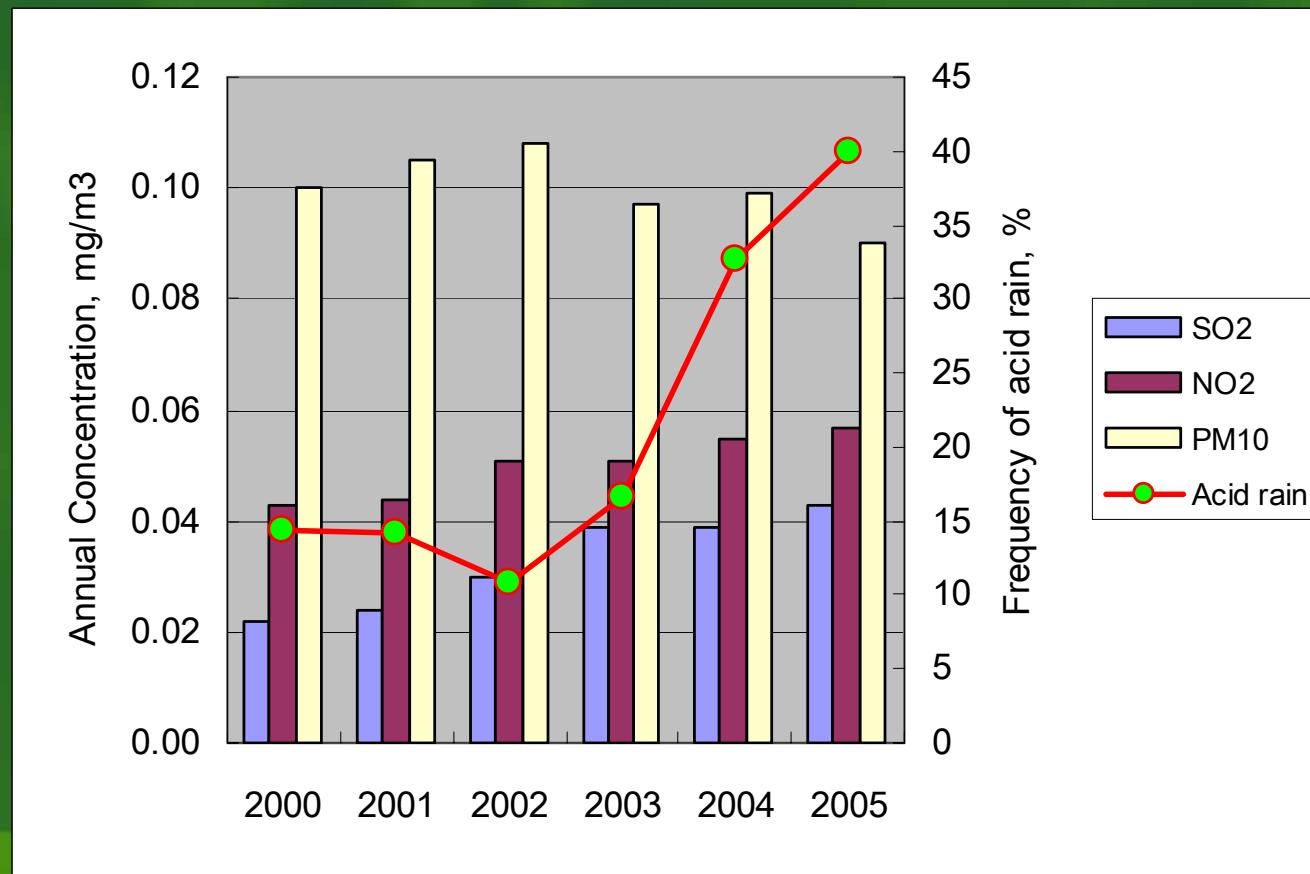

SO<sub>2</sub> concentration and the frequency of acid rain remains increasing in the past years from 2000 to 2005-Jiangsu case.

### 3. 2000~2005年SO<sub>2</sub>、NO<sub>2</sub>和酸雨频率普遍升高—上海案例

SO<sub>2</sub>, NO<sub>2</sub> concentrations and the frequency of acid rain keeps increasing in the past years from 2000 to 2005 - Shanghai case

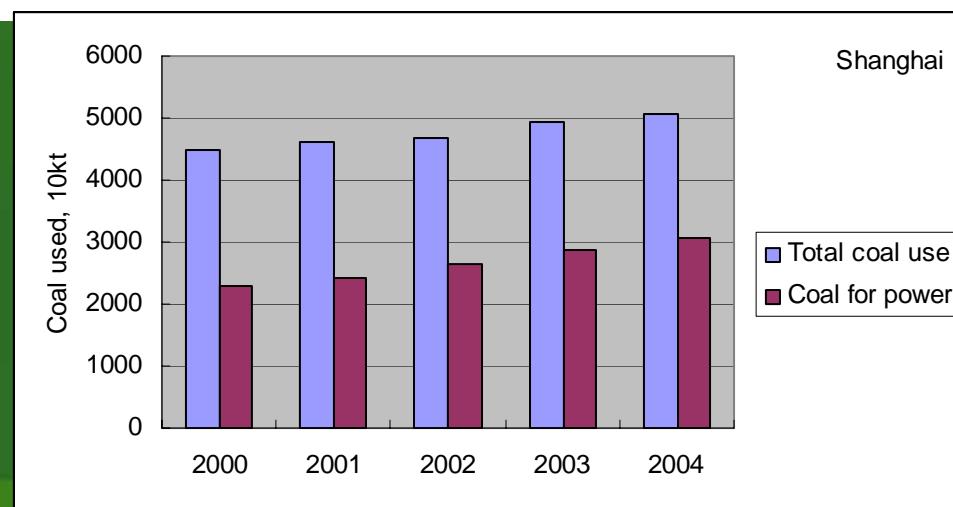

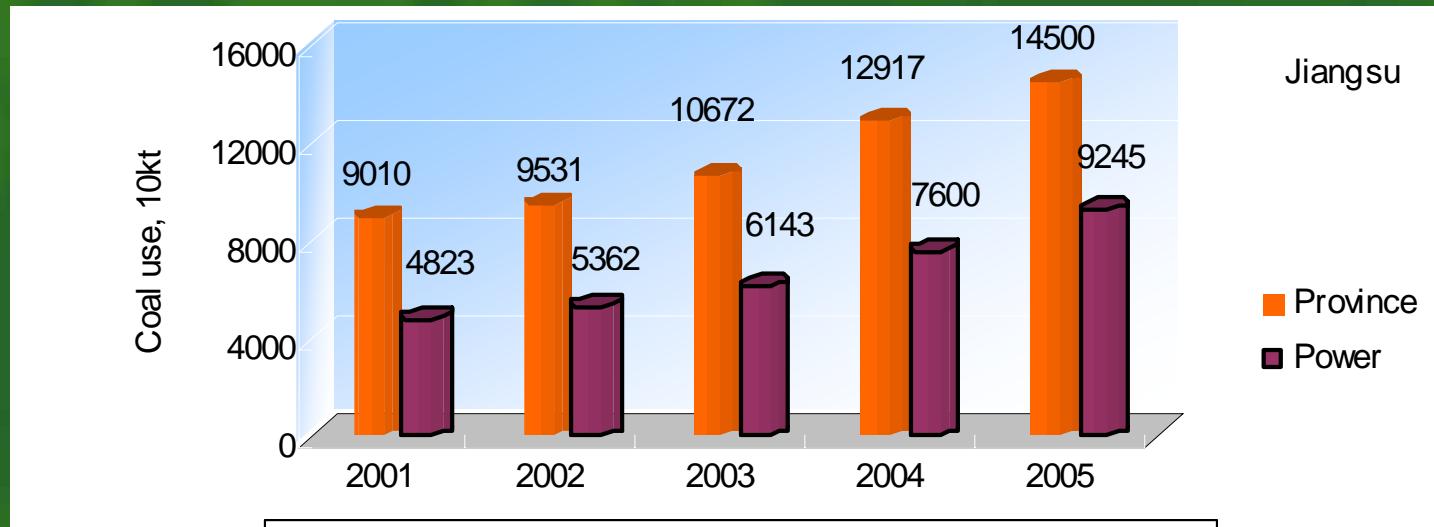

# 造成长三角空气污染的主要原因 The driving forces of air pollution in YRD

# 1. 用煤量大幅增加

## Rapid increase of coal use in YRD including Jiangsu and Shanghai

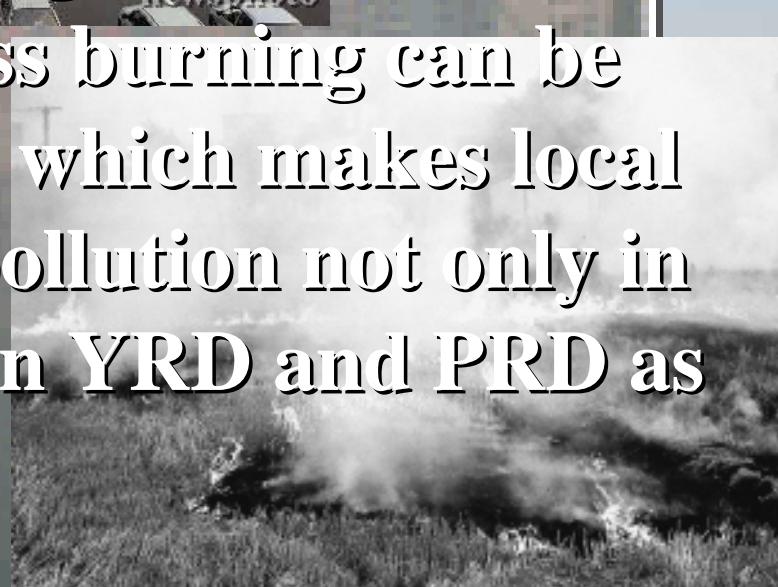

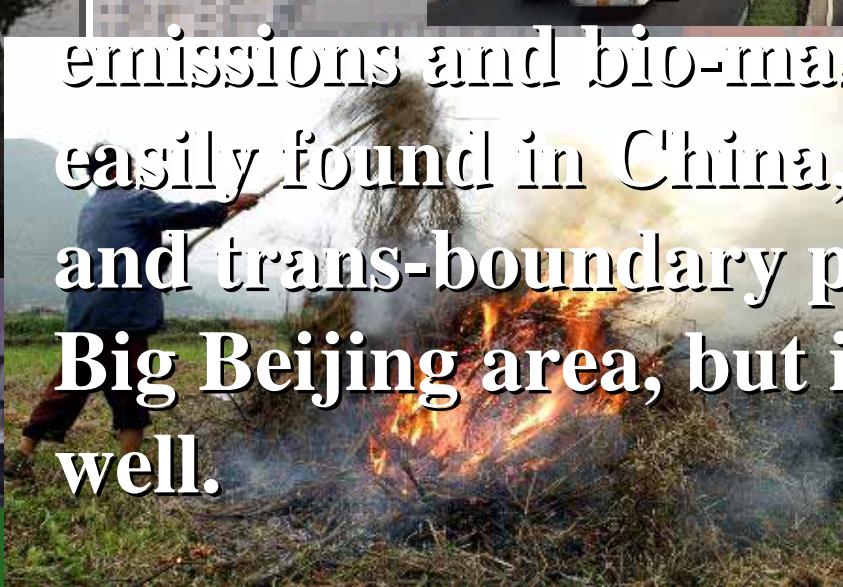

2. 工业、交通、农业和生物质燃烧随处可见，不仅造成本地而且造成大范围跨区大气污染

Industrial, transport, agricultural

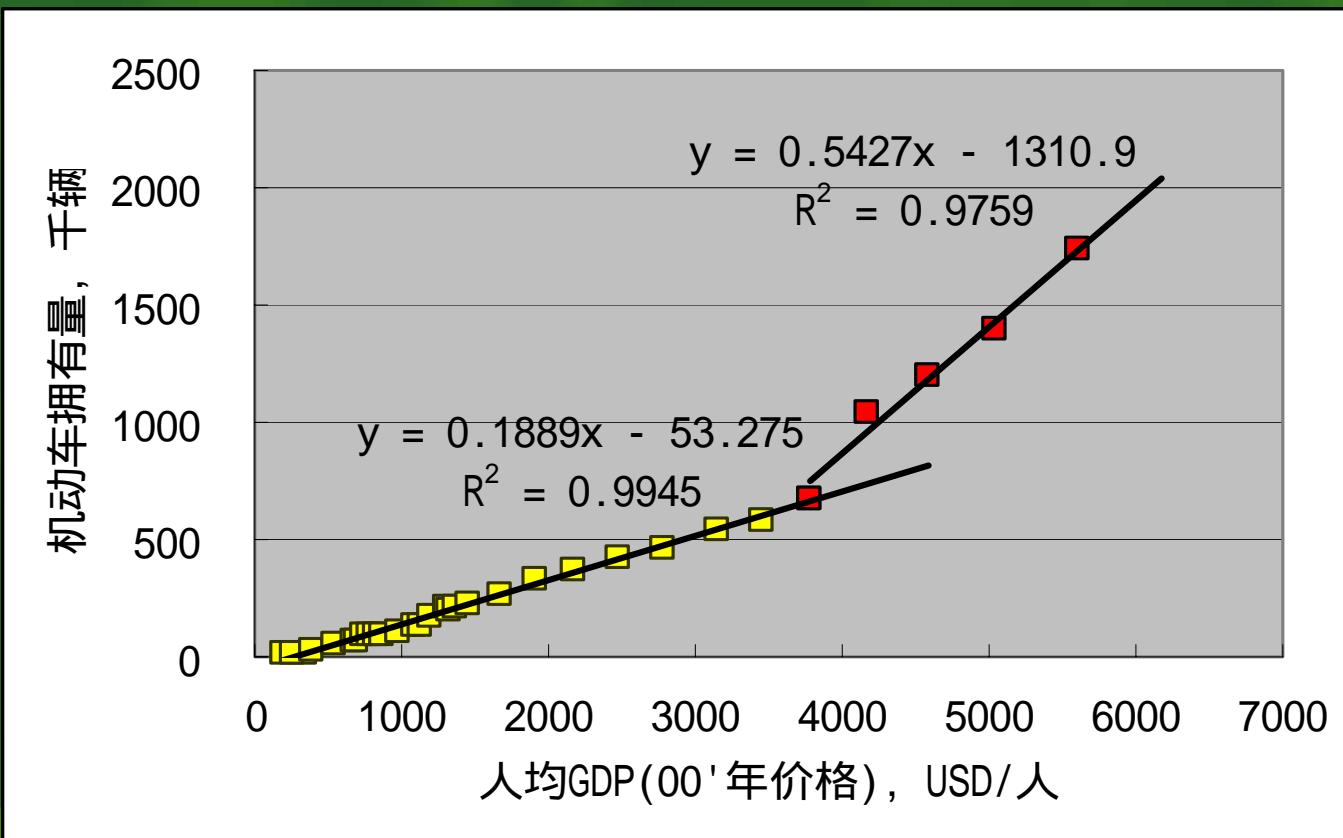

emissions and bio-mass burning can be easily found in China, which makes local and trans-boundary pollution not only in Big Beijing area, but in YRD and PRD as well.

3. 人均GDP超过4000USD后，机动车保有量的增长速度明显加快

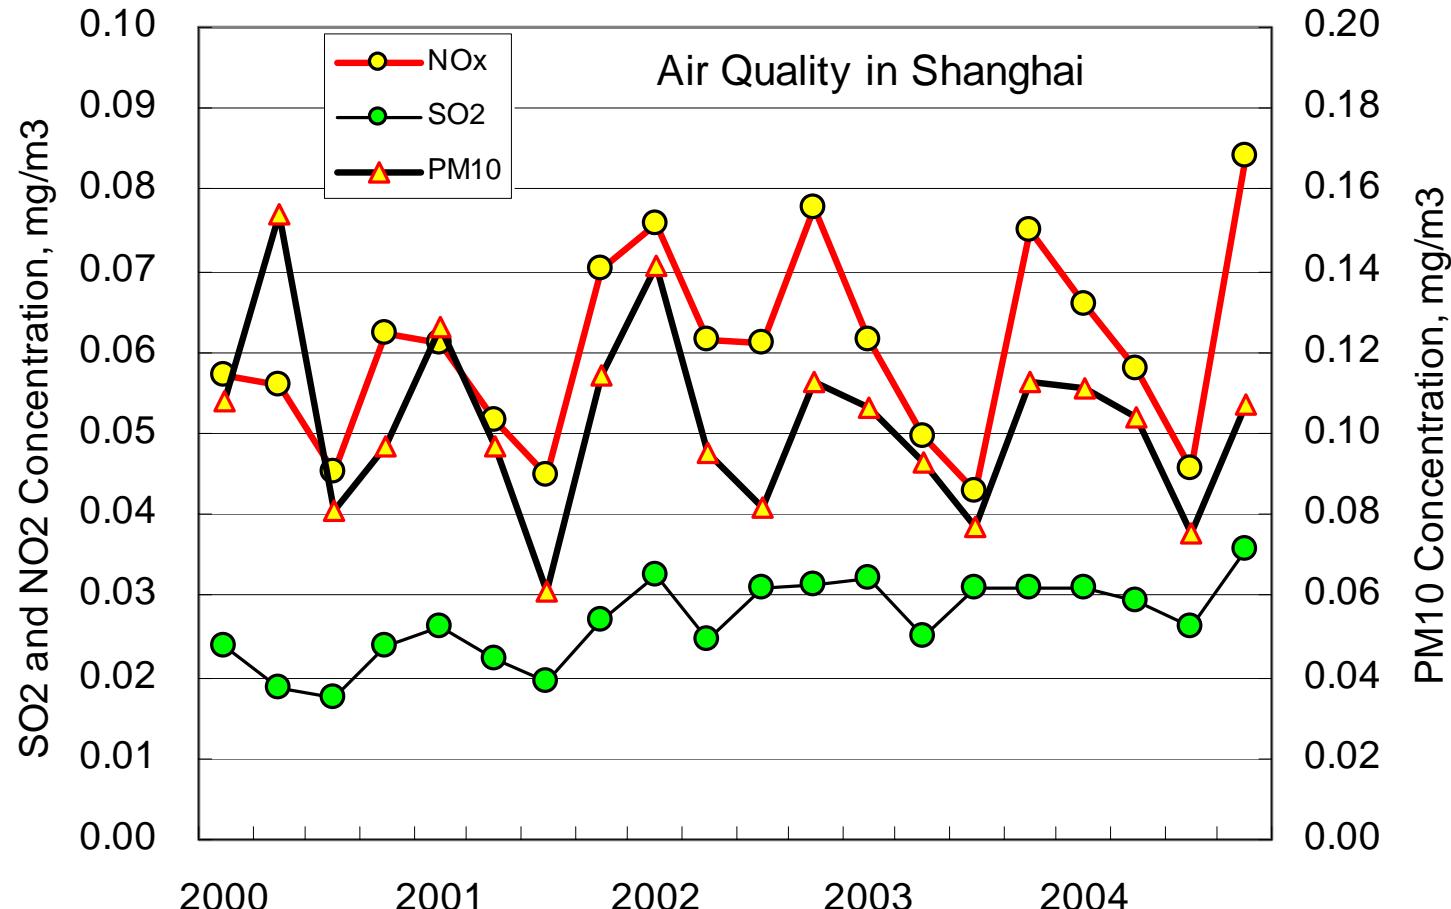

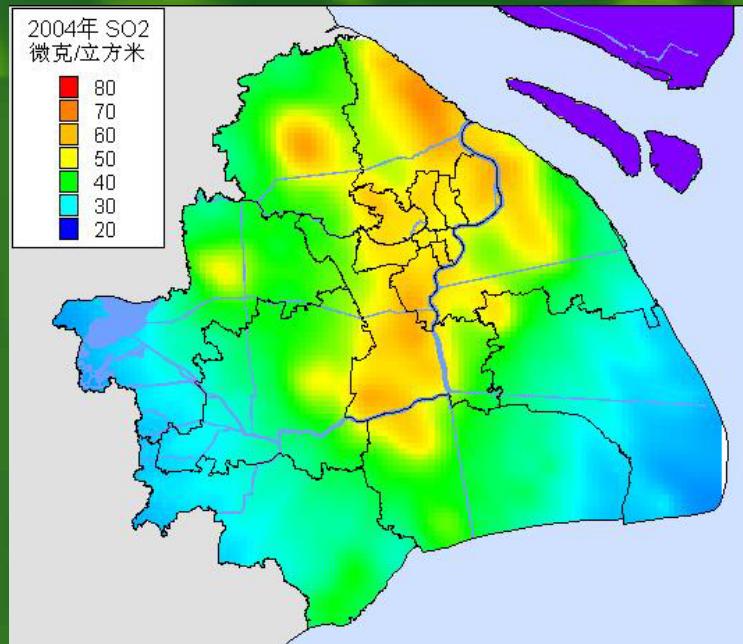

The growth speed of vehicle population is obviously fast when the GDP per capita is greater than 4000 USD.

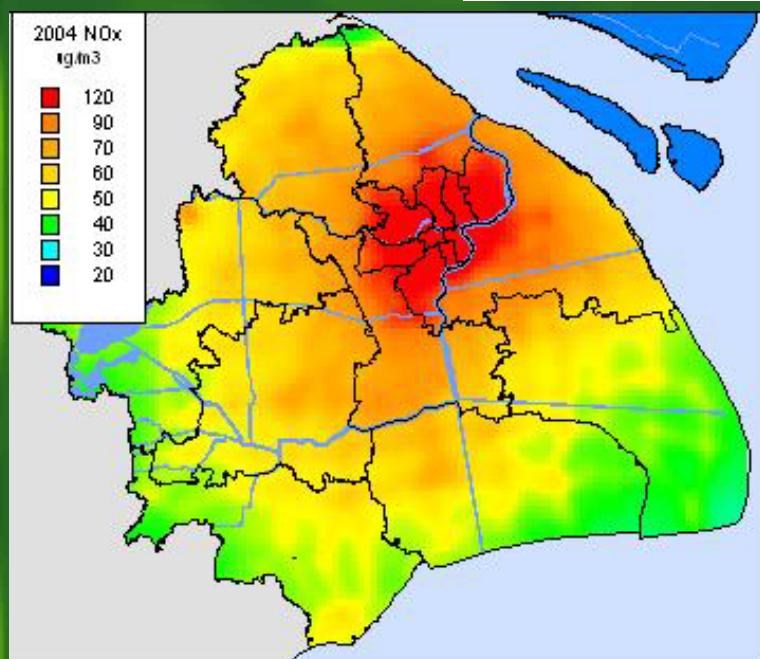

某些城市 $\text{SO}_2$ 、 $\text{NO}_2$ 和 $\text{PM}_{10}$ 保持较高的水平. In some big cities,  $\text{SO}_2$ ,  $\text{NO}_2$  and  $\text{PM}_{10}$  remains a high concentration.

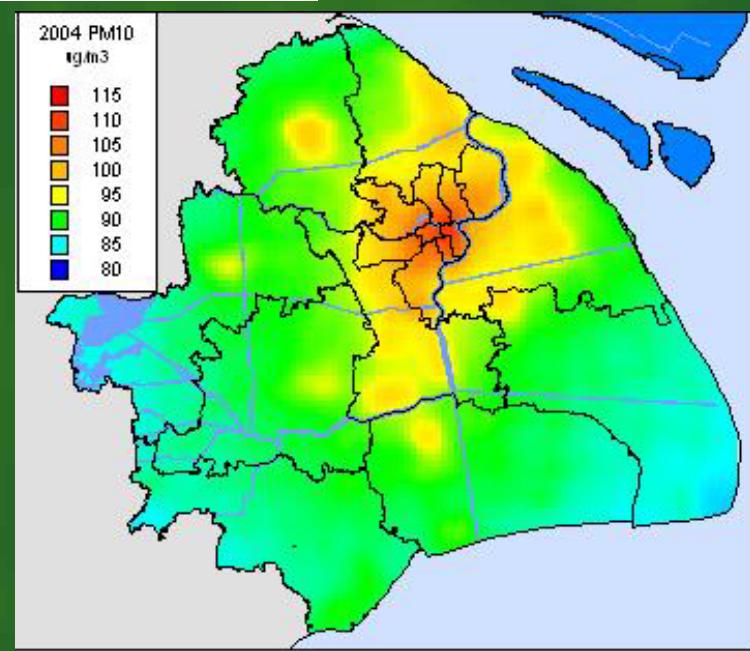

SO<sub>2</sub> pollution in  
Shanghai, 2004

NO<sub>x</sub> pollution in Shanghai, 2004

PM<sub>10</sub> pollution in Shanghai, 2004

### 3.长三角未来面临的压力 Future pressures in Yangtze River Delta

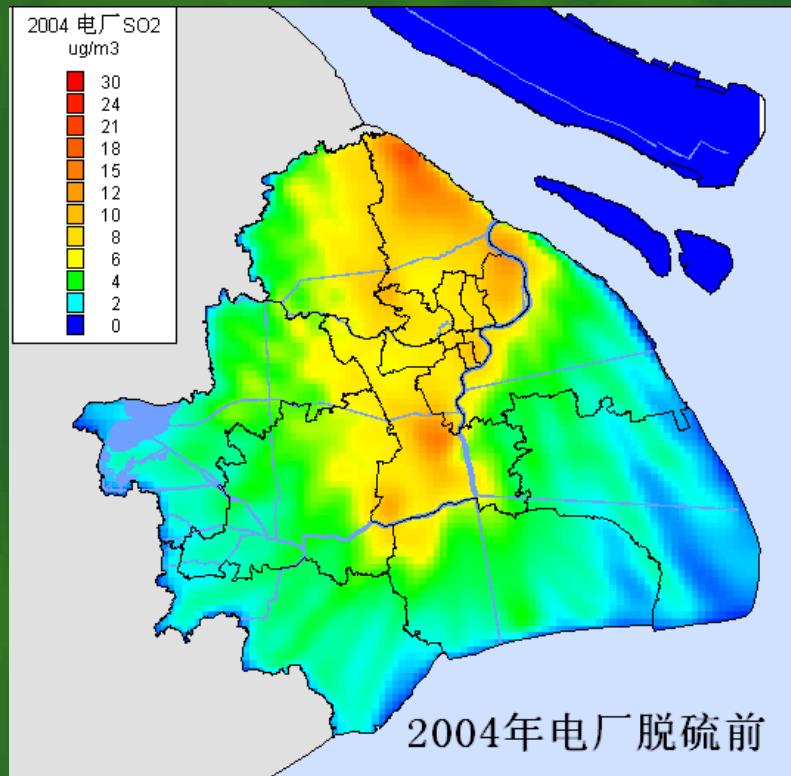

-urban, and  
-regional air qualities

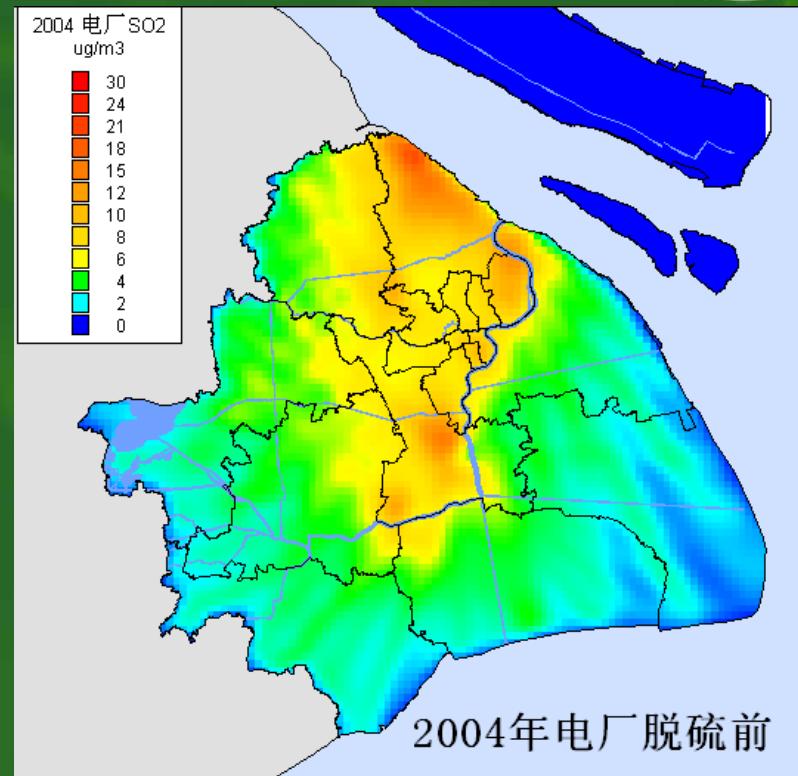

**1. First, let's look at urban, and  
take Shanghai as an example**

# 电厂脱硫前后环境效益的比较 Effect analysis of SO<sub>2</sub> Reduction

The concentration of SO<sub>2</sub> in downtown area would exceed Class II of NAAQS, if there were no effective measures in the coming years.

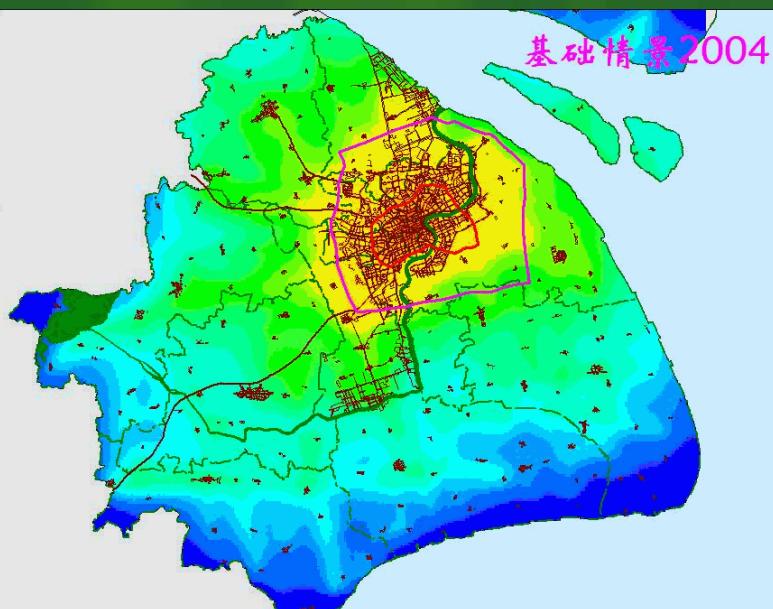

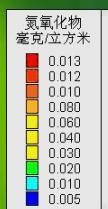

9.57 GW units must install DeSOx end pipe technologies, about 170kt SO<sub>2</sub> emission will be reduced by 2010.

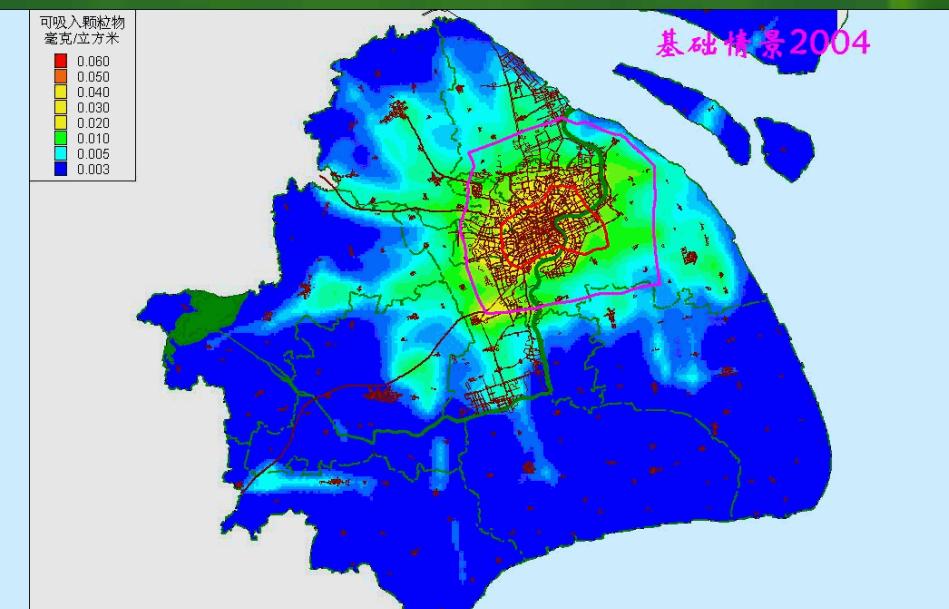

然而,因为NOx和PM10的控制政策和行动慢于排放增长速度,大气中NOx含量还将继续升高

However, the NOx and PM10 concentration will remain increasing, since the pollution control policy and actions act slowly comparing to emission increase speed.

Trend of NOx pollution  
in BAU case, 2004-2020

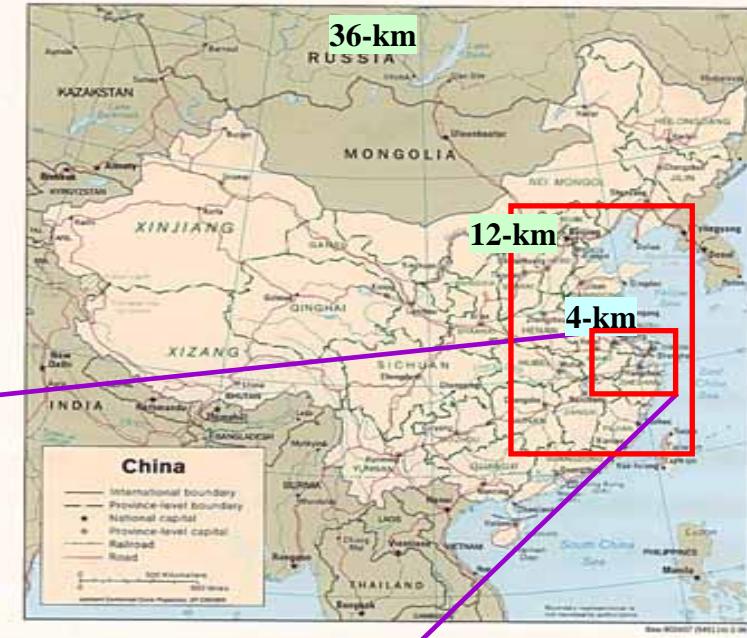

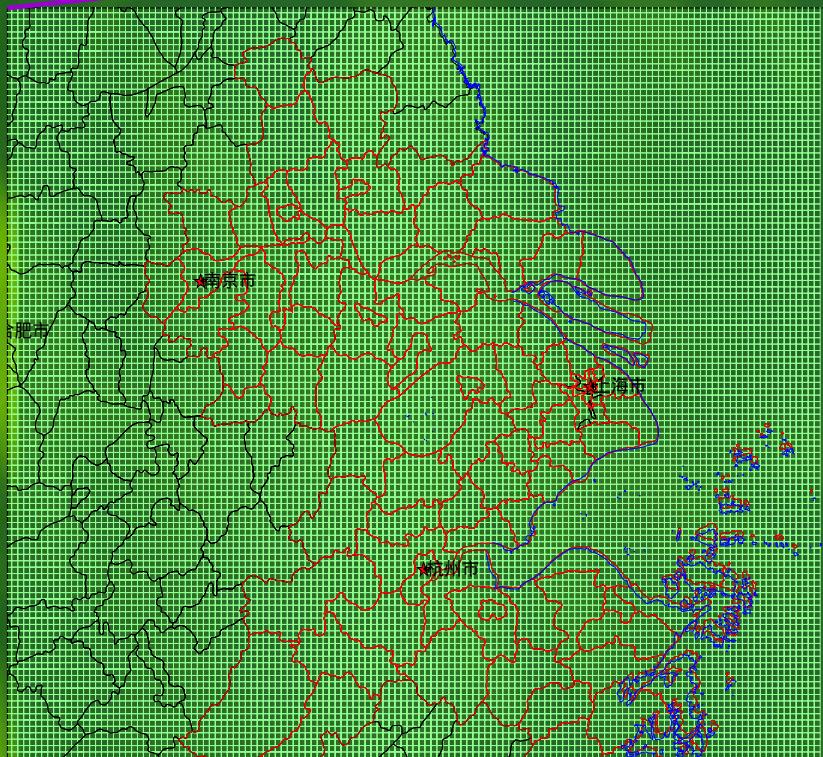

Trend of PM<sub>10</sub> pollution  
in BAU case, 2004-2020

**2. Then, look at the regional air quality problems in YRD**

# 长三角大气污染输送研究 范围 Domain of YRD air quality study

## 4. 结束语

# Conclusions

# 中国大气污染的历史与现状

## —全球大气污染浓缩版在中国的再现

### 原始型、区域型和复合型

The current air pollution in China is a duplicate of the air pollution happened in the developed countries in the past, but in compress pattern  
- original, regional, multiple types

70年代：燃煤污染  $\text{SO}_2$ , TSP,  $\text{PM}_{10}$   
1970's: coal pollution era

80年代：扬尘； $\text{SO}_2$  , TSP ,  $\text{PM}_{10}$   
1980's: industry + construction  
dust;  $\text{SO}_2$ , TSP,  $\text{PM}_{10}$

90年代：燃煤 + 扬尘 + 机动车；  
 $\text{SO}_2$ , TSP,  $\text{NO}_x$ , VOC,  $\text{O}_3$  ,  $\text{PM}_{10}$ ,  $\text{PM}_{2.5}$   
1990's - : Industry + vehicle  
emission + construction dust;  
 $\text{SO}_2$ , TSP,  $\text{PM}_{10}$

烟雾  
光化学  
Smog  
Photochemical

酸雨  
Acid Rain

灰霾  
Haze

大气复合性污染

老的污染还未解决，机动车尾气污染、臭氧污染、细微颗粒物污染、光化学烟雾污染等新的问题已经开始凸现

The original air pollution  
haven't been solved, new  
pollutants, are coming out.

发达国家一百多年经济发展分阶段出现的环境问题，在近20年的发展历程中，集中性出现

Air pollution happened in the developed countries by type/time, however it comes to China in a very short time period.

**问题1：十一五脱硫后，中国酸雨、  
 $\text{SO}_2$ 、 $\text{PM}_{10}$ 会有什么样的  
变化？**

**Q1: How it will change when  
 $\text{DeSO}_x$  action implemented in  
terms of acid rain,  $\text{SO}_2$ , and  
 $\text{PM}_{10}$ ?**

**问题2:** PM<sub>10</sub>和O<sub>3</sub>的暴露情况？

**Q2:** How about air pollution exposure to PM<sub>10</sub> and O<sub>3</sub> in future?

**问题3:** 提高能见度，降低PM<sub>10</sub>和O<sub>3</sub>的政策？

**Q3:** What type policies or actions need to be taken for reducing PM<sub>10</sub> and O<sub>3</sub> level for blue sky?

# 关键技术：

要解决上述问题，制定有效的政策，除了污染控制技术外，模型是一个好的选择

## Key technologies:

To get better understand of air pollutants disperse, transport, and transform in air from one place to another, and for policy recommendations, MODELING WORK IS A GOOD SELECTION.
